

100% Acacia Tiles

Installation and maintenance

Technoflex 100% Acacia wood tiles offer the opportunity to change the look of your backyard, patio, balcony or deck at low cost, easily and without the need for professional intervention.

Installation steps

1) Surface preparation:

- The tiles must be laid on a flat surface. It is recommended to install them on a concrete slab.
- Allow a slight slope of +/- 1cm for rainwater drainage.
- Do not install on soft or damp ground (lawn or earth), as water retention will accelerate the deterioration of the wood.

2) Lay the tiles easily using the interlocking system:

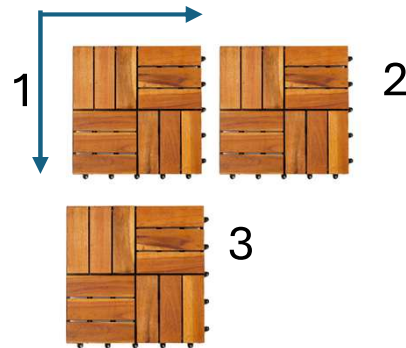

- The tiles can be laid indoors and outdoors.
- They can be cut using a fine-toothed handsaw or jigsaw at low speed to achieve a clean cut.
 - Do not use a circular saw or grinder.
- Assembling the tiles is simple and easy with the male and female interlocking system.
- If possible, always start with a perfectly square corner (90 °).
- Start by positioning the two female sides of your first tile at a 90° angle, which will make it easier to fit the following tiles together.

Layout

Maintenance

- Wash with a soft, slightly damp cloth.
- Do not use detergents, solvents, or alcohol-based cleaners.
- For stubborn dirt, use a product suitable for oiled wood.

Protect and nourish the wood

- The tiles are pre-oiled for better moisture resistance.
- It is recommended to oil them upon installation and at the start of each season.
- Apply a new treatment as soon as the wood feels dry to the touch.
- Use only solvent-free exterior wood oils.
- Never use a wire brush or a pressure washer.

1 Year limited warranty

- It is the customer responsibility to ensure that the product and its intended use are compliant.
- The warranty is valid for 1 year following the purchased date and upon proof of purchase.
- The warranty covers only the defective parts that require replacement.
- Technoflex undertakes to provide new parts as quickly as possible.
- The warranty does not cover : shipping costs, travel, labor, communication or fee related to a claim, and direct and indirect damages.
- Size variations of +/- 2 to 3 % due to climatic conditions are considered normal and are not guaranteed.
- IMPORTANT : Wood is a living material that expands and contracts over time. You may see cracks appear over time, but these do not affect the product's lifespan.
